## VirtualDub: Joining AVI files

If you have multiple [AVI](#) files that you would like to join together (like if you made a [DVDRip](#) before and ended up with two 700MB AVI files, then you might want to join them together) then this guide will show you how to do just that with **VirtualDUB**.

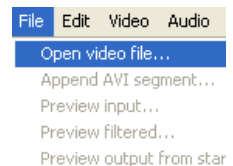

## Introduction & Requirements

**[VirtualDUB](#)** - You need this excellent tool to join two AVI files together.

This will not work for files that have different [frameres](#), [codecs](#) or [resolutions](#). The idea is that we will add the two files together quickly without having to do any re-encoding.

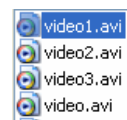

## Step. 1 - File --> Open Video File

Launch VirtualDub and open the first AVI file in the sequence of videos you want to join by selecting **File--> Open video file**.

## Step. 2 - Open First AVI file

Find the first AVI file, select it and then click **Open**. You will now see it open in VirtualDUB. If the program says it's unable to locate a decompressor, then you will have to find the appropriate codec at **AfterDawn**. I recommend you install [FFDShow](#).

## Step. 3 - Scroll to the end of the file
